

Sypro Ruby Staining Protocol

*- Note: use plastic trays as the dye binds to glass.

1. After electrophoresis, wash gel in 10% Methanol / 7% Acetic Acid for approximately 1 hr.
2. Remove from the wash and place in Sypro Ruby for at least 3 hrs. Gels can be left in the stain overnight.
3. Remove from stain and place in 10% Methanol / 7% Acetic Acid again for at least 1 hr.
4. Gels can be stored in the wash solution or in water at 4 °C.
